Laboratory Experiments in Analytical Chemistry Maurice O. Iwunze

In the recent past quantitative chemical analysis textbook writers included selected experiments to complete and complement the text and thus give instructors a choice to select the experiments to be performed by students in quantitative analysis course. On the other hand, this is not so for courses in instrumental analysis which is a sequential course to quantitative analysis. This is, perhaps, due to the numerous instrumental techniques that have been developed over the years for chemical analysis. In its stead, textbooks on experiments in instrumental analysis are common, and these are as diversified as the topics covered in lecture courses. Most of the experimental topics covered, especially, in quantitative analysis, lean heavily on determination of materials or compounds of inorganic chemistry origin. This seems to be the tradition with only a few exceptions. However, recently, textbooks on quantitative analysis have emerged and continue to emerge, without any experimental section. This is not quite surprising though, since many instructors nowadays, tend to design their own experiments to suit and complement their lecture materials. On the other hand, the trend in the production of books on instrumental analysis experiments has remained the same. The objective of this book is therefore two fold. One is to design a reasonably comprehensive laboratory text that embodies both areas of analytical chemistry. The other is to shy away from the tradition of making quantitative analysis experiments lean too heavily on inorganic materials. To this end, several topics ranging from inorganic to organic materials are included in this laboratory text book. A new element is also introduced in this book. That is, students are exposed throughout the book to the analysis of compounds of pharmaceutical relevance.

From reader reviews:

Filiberto Dacosta:

What do you concerning book? It is not important to you? Or just adding material when you need something to explain what the ones you have problem? How about your spare time? Or are you busy particular person? If you don't have spare time to do others business, it is gives you the sense of being bored faster. And you have time? What did you do? Everyone has many questions above. They must answer that question simply because just their can do which. It said that about book. Book is familiar on every person. Yes, it is suitable. Because start from on kindergarten until university need this specific Laboratory Experiments in Analytical Chemistry to read.

Suzanne Mitchell:

Reading a reserve tends to be new life style with this era globalization. With reading through you can get a lot of information that can give you benefit in your life. Together with book everyone in this world may share their idea. Textbooks can also inspire a lot of people. Many author can inspire their very own reader with their story or perhaps their experience. Not only the story that share in the textbooks. But also they write about advantage about something that you need case in point. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors on this planet always try to improve their ability in writing, they also doing some research before they write to their book. One of them is this Laboratory Experiments in Analytical Chemistry.

John Flores:

The book untitled Laboratory Experiments in Analytical Chemistry contain a lot of information on that. The writer explains the girl idea with easy approach. The language is very easy to understand all the people, so do certainly not worry, you can easy to read the item. The book was written by famous author. The author gives you in the new age of literary works. It is possible to read this book because you can read more your smart phone, or gadget, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can open up their official web-site and also order it. Have a nice examine.

Michael Sherman:

Reading a book make you to get more knowledge from the jawhorse. You can take knowledge and information from the book. Book is composed or printed or created from each source which filled update of news. On this modern era like now, many ways to get information are available for a person. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to open your book? Or just looking for the Laboratory Experiments in Analytical Chemistry when you desired it?
