Frozen Section Library: Genitourinary Tract Luan D. Truong, Steven S. Shen, Jae Y Ro

Frozen sections are performed for the purpose of rapid diagnosis while a patient is undergoing surgery, usually under general anesthesia, as a basis for making immediate treatment decisions. Therefore, frozen section diagnosis is often a highly demanding situation for the pathologist who must render a diagnosis quickly and a crucial determination for the patient and surgeon. In addition to the need for rapid recall of differential diagnoses, there are many pitfalls and artifacts that add to the risk of frozen section diagnosis that are not present with permanent sections of fully processed tissues that can be examined in a more leisurely fashion. Most standard pathology textbooks, both general and subspecialty, largely ignore the topic of frozen section. Few textbooks have ever focused exclusively on frozen section diagnosis and those textbooks that have done so are now out-of-date and have limited numbers of black and white figures. None has emphasized the education of the surgeon in terms of frozen section benefits, limitations or proper utilization.

The Frozen Section Library series will provide convenient, user-friendly handbooks for each organ system to expedite use in the hurried frozen section situation. These books will be small and light-weight, copiously color illustrated with images of actual frozen sections, highlighting pitfalls, artifacts and differential diagnosis. These books will also include perspectives for the surgeon and for communication with the surgeon and suggest ancillary procedures (for example, when to take tissue for microbiology cultures). Each 5 X 8 book is estimated to be about 200 to 250 pages in toto with 100 to 150 color figures each.

As a handbook for practicing pathologists, these books will be indispensable aids to diagnosis and avoiding dangers in one of the most challenging situations that pathologists encounter. Problems, such as differentiation of benign processes from malignant neoplasms which may be more difficult on frozen section than permanent section and which have a serious impact on the surgeon's immediate treatment decisions, will be emphasized. Rapid consideration of differential diagnoses and how to avoid traps caused by frozen section artifacts will be readily accessible to the users of the handbooks. A series of concise, easy-to-use, well-illustrated handbooks alleviates the often frustrating and time-consuming, sometimes futile, process of searching through bulky textbooks that are unlikely to illustrate or discuss pathologic diagnoses from the perspective of frozen

sections in the first place. Tables and charts will provide guidance for differential diagnosis of various histologic patterns.

The advantages of a series of organ-specific handbooks, in addition to the ease-of-use and manageable size, is that (1) it allows more comprehensive coverage of more diagnoses, both common and rare, than a single volume that tries to highlight a limited number of diagnoses for each organ and (2) it allows more detailed insight by permitting experienced authorities to emphasize the peculiarities of frozen section for each organ system. Although some differences in practice of frozen section exist between different institutions, such as differing policies regarding whether or not to perform frozen section on specific types of specimens, these differences are generally not significant and can be discussed (an organ-specific handbook by an expert in that organ system permits more opportunity for this type of discussion). Touch preparations, which are used for some organs such as central nervous system or thyroid more often than others, will be appropriately

emphasized and illustrated according to the need for each specific organ.

This series will be highly valuable to practicing surgical pathologists, both community and academic, and to pathology residents and fellows. The perspectives provided will also be valuable to surgeons and especially to surgery residents and fellows who must answer questions about pathology and frozen section on their board examinations. These handbooks will be easily portable by the individual but it is envisioned that many departments will want to also keep a series readily available in the frozen section laboratory.

From reader reviews:

Christopher Milbrandt:

Reading a book can be one of a lot of pastime that everyone in the world enjoys. Do you like reading book therefore. There are a lot of reasons why people enjoyed. First reading a book will give you a lot of new facts. When you read a book you will get new information since book is one of several ways to share the information as well as their idea. Second, reading a book will make anyone more imaginative. When you reading a book especially fiction book the author will bring one to imagine the story how the people do it anything. Third, you could share your knowledge to other individuals. When you read this Frozen Section Library: Genitourinary Tract, you could tells your family, friends in addition to soon about yours book. Your knowledge can inspire average, make them reading a publication.

Trevor Cianciolo:

Reading a reserve tends to be new life style within this era globalization. With reading through you can get a lot of information which will give you benefit in your life. With book everyone in this world may share their idea. Ebooks can also inspire a lot of people. Plenty of author can inspire all their reader with their story or even their experience. Not only the story that share in the textbooks. But also they write about the data about something that you need case in point. How to get the good score toefl, or how to teach your children, there are many kinds of book that exist now. The authors in this world always try to improve their skill in writing, they also doing some study before they write for their book. One of them is this Frozen Section Library: Genitourinary Tract.

Desmond Goforth:

People live in this new time of lifestyle always attempt to and must have the time or they will get lot of stress from both daily life and work. So , once we ask do people have free time, we will say absolutely indeed. People is human not only a robot. Then we question again, what kind of activity have you got when the spare time coming to an individual of course your answer may unlimited right. Then do you ever try this one, reading textbooks. It can be your alternative with spending your spare time, typically the book you have read is definitely Frozen Section Library: Genitourinary Tract.

Rachel Addison:

Don't be worry if you are afraid that this book will filled the space in your house, you can have it in e-book method, more simple and reachable. This specific Frozen Section Library: Genitourinary Tract can give you a lot of pals because by you checking out this one book you have issue that they don't and make anyone more like an interesting person. This book can be one of a step for you to get success. This publication offer you information that probably your friend doesn't recognize, by knowing more than additional make you to be great people. So , why hesitate? Let me have Frozen Section Library: Genitourinary Tract.
