## **Human Nature (Gene Culture and Human Prospect)** Paul R. Ehrlich

With the human evolution history as the vein, combining lifelike examples with rigorous natural science and social science, this book describes how the evolution functions as well as the significance of the past human evolution to the future. The author emphasizes that besides the influence of biological inheritance, cultural and environmental changes also play an important role in the evolution. The culture evolution not only creates civilization, but is also the main force in the destruction of civilization.
