*Motoichi Ohtsu, Hirokazu Hori*

## **Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics)** Motoichi Ohtsu, Hirokazu Hori

Conventional optical science and technology have been restricted by the diffraction limit from reducing the sizes of optical and photonic devices to nanometric dimensions. Thus, the size of optical integrated circuits has been incompatible with that of their counterpart, integrated electronic circuits, which have much smaller dimensions. This book provides potential ideas and methods to overcome this difficulty. Near-field optics has developed very rapidly from around the middle 1980s after preliminary trials in the microwave frequency region, as proposed as early as 1928. At the early stages of this development, most technical efforts were devoted to realizing super-high-resolution optical microscopy beyond the diffraction limit. However, the possibility of exploiting the optical near-field, phenomenon of quasistatic electromagnetic interaction at subwavelength distances between nanometric particles has opened new ways to nanometric optical science and technology, and many applications to nanometric fabrication and manipulation have been proposed and implemented. Building on this historical background, this book describes recent progress in near-field optical science and technology, mainly using research of the author's groups. The title of this book, Near-Field Nano-Optics-From Basic Principles to Nano-Fabrication and Nano-Photonics, implies capabilities of the optical near field not only for imaging/microscopy, but also for fabrication/manipulation/processing on a nanometric scale.

### **From reader reviews:**

#### **Rodney Wilson:**

In this 21st hundred years, people become competitive in each way. By being competitive right now, people have do something to make these survives, being in the middle of often the crowded place and notice by means of surrounding. One thing that occasionally many people have underestimated it for a while is reading. Yep, by reading a reserve your ability to survive enhance then having chance to endure than other is high. For you who want to start reading a new book, we give you this kind of Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics) book as beginning and daily reading publication. Why, because this book is greater than just a book.

#### **Hilary Williams:**

People live in this new day of lifestyle always try and and must have the spare time or they will get lot of stress from both way of life and work. So , whenever we ask do people have time, we will say absolutely indeed. People is human not really a robot. Then we request again, what kind of activity do you possess when the spare time coming to anyone of course your answer can unlimited right. Then do you try this one, reading books. It can be your alternative in spending your spare time, often the book you have read will be Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics).

#### **Megan Urick:**

Beside this particular Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics) in your phone, it can give you a way to get closer to the new knowledge or data. The information and the knowledge you might got here is fresh from the oven so don't end up being worry if you feel like an previous people live in narrow community. It is good thing to have Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics) because this book offers to you personally readable information. Do you at times have book but you rarely get what it's facts concerning. Oh come on, that will not end up to happen if you have this with your hand. The Enjoyable option here cannot be questionable, including treasuring beautiful island. Use you still want to miss this? Find this book as well as read it from today!

#### **Christie Rich:**

This Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics) is brand-new way for you who has curiosity to look for some information because it relief your hunger of knowledge. Getting deeper you in it getting knowledge more you know or else you who still having tiny amount of digest in reading this Near-Field Nano-Optics: From Basic Principles to Nano-Fabrication and Nano-Photonics (Lasers, Photonics, and Electro-Optics) can be the light food to suit your needs because the information inside this particular book is easy to get by simply anyone.

These books create itself in the form that is reachable by anyone, that's why I mean in the e-book application form. People who think that in reserve form make them feel sleepy even dizzy this book is the answer. So there is not any in reading a reserve especially this one. You can find actually looking for. It should be here for anyone. So , don't miss this! Just read this e-book style for your better life along with knowledge.
